## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement filed February 9, 2001 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Specification***

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it is too long. Correction is required. See MPEP § 608.01(b).
4. The disclosure is objected to because of the following informalities: in particular, the current status (whether patented, pending or abandoned) of each parent application must be indicated.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claims 57-77 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. More specifically, there is no clear support in the specification for the language of "essentially water-free composition" and there is no clear support in the specification as filed for a coated substrate, coated wire or coated cable. Accordingly, this language is construed to be new matter.

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 61 and 71 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In particular, these claims do not further limit the compound of claims 57 and 67, rather they redefine said compound, which broadens the scope.

***Claim Rejections - 35 USC § 102***

Art Unit: 1774

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 57-61, 63-65, 67-71, 73-75, and 77 are rejected under 35 U.S.C. 102(b) as being anticipated by PCT Publication No. WO 93/18223 (Geursen).

10. Geursen teaches a process for treating a substrate with a composition and said treated substrate, wherein the composition comprises a superabsorbent polymer in combination with a lubricant and additive and the substrate can comprise a wire or cable, as required by claims 63-65 and 73-75. In addition, Geursen teaches that the superabsorbent material can be based on acrylic acid, acrylamide or an acrylate as required by claims 59-60, 69-70, and 77 and that the lubricant is of the type contemplated by applicants in claims 57-58, 61, 67-68, and 71.

### ***Conclusion***

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
